

Desktop-Release-build
/_deps/googletest-src
/googletest/test/production.h

```
graph BT; A["Desktop-Release-build  
/_deps/googletest-src  
/googletest/test/gtest  
_prod_test.cc"] --> C["Desktop-Release-build  
/_deps/googletest-src  
/googletest/test/production.h"]; B["Desktop-Release-build  
/_deps/googletest-src  
/googletest/test/production.cc"] --> C;
```

The diagram illustrates a dependency structure where two source files, `_prod_test.cc` and `production.cc`, both include the `production.h` header file. The header file is located at `/googletest/test/production.h` within the `_deps/googletest-src` directory of a `Desktop-Release-build`. The source files are located in the same directory structure but with different file extensions: `/googletest/test/gtest_prod_test.cc` and `/googletest/test/production.cc`.
